IT TAKES A HEALTHY MACHINE TO BUILD A HEALTHY BUSINESS

Our Technical Inspection Service is a program designed to help SENNEBOGEN customers get the maximum value from their investment in our material handlers:

- Maximize uptime
- Prevent premature failures
- Optimize productivity

Nobody knows your SENNEBOGEN better than the people who built it. Our technical inspection specialists are factory-trained to recognize and identify potential problems related to your specific operating conditions.

Over 200 check points, measurements, and test results are detailed in easy-to-read inspection reports that cover every aspect of your material handler's structure and systems; end to end, top to bottom, inside and out.

Your report will flag:

- Items for immediate action
- Long-term service needs
- Required updates to protocols and service intervals for ongoing machine maintenance

Your **Technical Inspection specialist** comes equipped with all the knowledge, tools, and testing equipment to conduct a comprehensive check-up on the health of your SENNEBOGEN material handler:

- ✓ Main pump pressures checked and reported
- ✓ Swing bearing deflection checked and reported
- ✓ Hydraulic breather filters
- ✓ Safety appliances inspected
- ✓ Engine, mounts, air filters, leaks
- ✓ Batteries, battery connections
- ✓ Lubrication of swing gear
- ✓ Magnet system performance (voltage)
- ✓ Auto lubrication system, grease lines, reservoir
- ✓ Undercarriage components
- ✓ Tires, wheels, tracks
- ✓ Hydraulic cylinders, rods, leaks, guards, safety valves
- ✓ Hoses (leaks, rubbing, dry rot)
- ✓ Counterweight for fastener damage & proper fit
- ✓ Attachment condition
- ✓ All welds and steel structures inspected
- ✓ Full report with comments, pictures included
