

Sennebogen Second-Life Rebuild Program

Get more life out of your Sennebogen machine with Sargents rebuild program focused on taking your machine back in time to maximize its long-term value. To get started, provide your contact information, machine details, and any available maintenance records so our team can review the machine's history.

Before quoting, the machine must be thoroughly pressure washed and prepared for inspection. Guards, panels, or covers may need to be removed so our technicians can properly evaluate the machine. The rebuild quote will account for recent repairs and components that may not need replacement, helping reduce unnecessary costs. An inspection fee applies, but it is waived if the rebuild is approved. All Service is completed by our team of Sennebogen factory certified techs.
